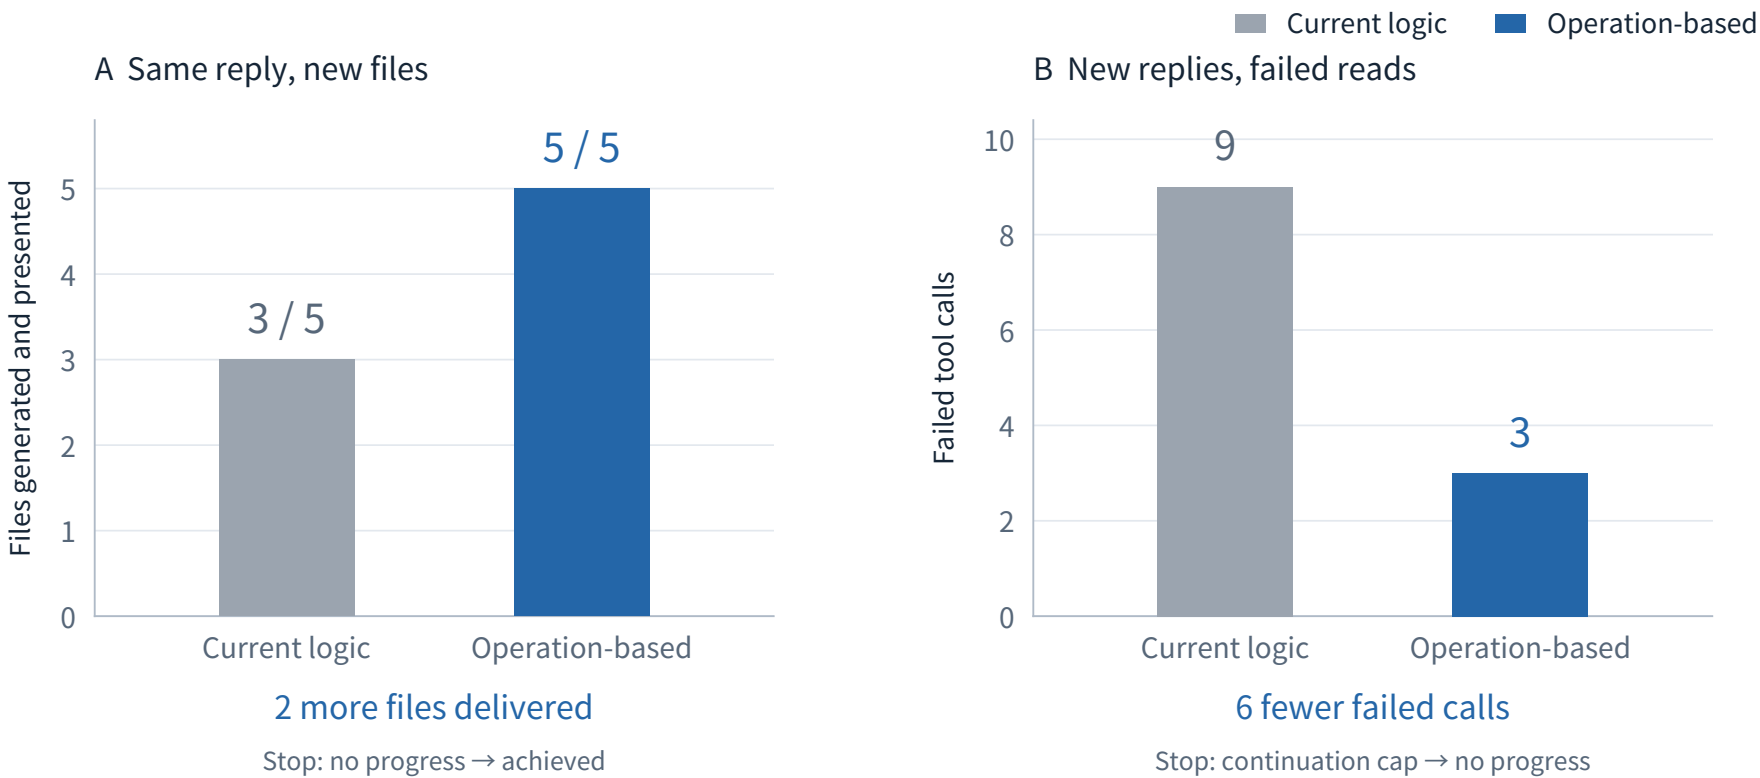
Goal progress: paired runtime scenarios

Web → Gateway → worker → graph → files / state; scripted local model; identical completion oracle



Scope: 2 fixed scenarios, 1 paired run each; default loop and continuation limits retained; no paid model calls.

Runtime mechanism test, not model quality or business-task success rate. New operations do not prove useful progress.

Source: PAIR_DATA.json, tool receipts, file audits and browser records. Zero-origin bars; no statistical inference.
